Dear Prof. Goldfarb, dear Prof. Vega,

The period for open discussion of your paper "Study of electron spectral diffusion process under DNP conditions by ELDOR spectroscopy focusing on the  $^{14}\text{N}$  Solid Effect" has expired. You have received comments from two referees, which are positive, suggesting minor revision of your paper.

As I can see, you have already provided responses to both reviewers. I request you to submit the revised paper as well. I will have a look at the changes you have made

C1

in the manuscript, if necessary the paper will go through an additional (swift) round of refereeing (carried out by one of the original reviewers).

Sincerely yours,

Konstantin Ivanov.
