S1. LINE DECOMPOSITIONS

See Figs. 1, 2, and 3.

S2. DIPSHIFT DIAGRAMS

In the diagrams in this section, at the left-hand side the data are shown together with the fitted model functions. The right-hand sides show plots of the mean-square deviation $\chi^2$ versus damping constant $r$ and residual dipolar coupling $D_{res}$. In the latter, the cross marks the position of minimum mean-square deviation $\chi^2_{min}$; the closed line connects all points where $\chi^2 = 2\chi^2_{min}$. The evaluation was not executed for all spinning frequencies; it was omitted for such frequencies where the line under consideration had a distance of an integer multiple of spinning frequency to another line.
Figure 1. Decomposition of overlapping middle-ring lines of both protonated carbons and those carbons bound to C≡C in PIZOF-10 (right) and in PIZOF-11 (left).)
